

Summary

AI Engineer and CS (AI & DS) student with 2+ years of experience building autonomous AI agents, RAG pipelines, voice systems, and full-stack ML applications. Skilled in Python, JavaScript, and cloud deployment. Seeking AI/ML engineering internships with remote opportunities.

Technical Skills

Languages:	Python, JavaScript, C++, Java, Kotlin
AI / ML:	TensorFlow, PyTorch, XGBoost, LightGBM, LSTM, Scikit-learn
Frameworks & Tools:	LangChain, OpenAI API, Pinecone, MongoDB, DVC, MLflow
Infrastructure:	Docker, Kubernetes, AWS S3, Polygon (Web3/Solidity)
iOS:	SwiftUI, SwiftUI

Experience

Software Engineer	June 2025 – July 2025
- Developed a conversational AI chatbot using NLP and NLU pipelines for low-latency conversational AI. - Implemented a secure, context-aware knowledge retrieval across multiple data sources. - Used machine learning models for sentiment analysis and ML to automate validation and eliminate manual review.	
Project: InvoiceFlow	GitHub
Software Engineer	Location
- Developed a risk assessment system using LightGBM (risk classification) and road-type features. - Implemented real-time alerts, and crowdsourced pothole reporting with geotagging.	
Project: RiskAssessment	GitHub
Python Developer	
Developed a stock-out detection system (Reason → Execute) on Gemini that detects stock-out events with 90% UI stability with NABL/ISO 15189-compliant data.	
Project: StockOutDetection	Live Demo
FastAPI Developer	
Developed a referral system with calibrated confidence and recommendation algorithms.	
Project: ReferralSystem	GitHub
React Developer	FS
Developed a DVI analysis, CNN field-data credibility scoring, and smart contracts.	
Project: DVIAnalysis	GitHub
Docker Developer	
Developed a hyperparameter tuning, cloud deployment, and a middleware.	
Education	
B.Tech	Aug 2023 – Jun 2029
