

Summary

	• Designed and deployed within 24 hours a RAG pipeline, deployed on AWS Lambda for serverless deployment. Seeking
	• Co-built a full-stack blue carbon marketplace with React, Next.js, Node.js, Express, MongoDB, Solidity, and Web3.js. and NFT carbon credits minted on Polygon.
	• Co-built an end-to-end MLOps pipeline for healthcare fraud detection using Python, PyTorch, TensorFlow, DVC, MLflow, FastAPI, Docker, OAuth2, and AWS. Deployed on AWS Lambda for serverless deployment.
	• Containerized MLOps lifecycle: Dockerized ML models, automated builds with GitHub Actions, CI/CD pipeline for deployment, and a JWT-secured FastAPI inference backend.

Sw	• Designed and deployed within 24 hours a RAG pipeline, deployed on AWS Lambda for serverless deployment. Seeking
